

Contents

- Chapter 1. Integrated imaging modalities in the cardiac catheterization laboratory
- Chapter 2. Complications of percutaneous coronary intervention
- Chapter 3. Percutaneous vascular access : transfemoral, transseptal, apical and transcaval approach
- Chapter 4. Radial artery approach
- Chapter 5. Cutdown approach : femoral, axillary, direct aortic and transapical
- Chapter 6. Catheterization in childhood and adult congenital heart disease
- Chapter 7. Pressure measurements
- Chapter 8. Hemodynamics of tamponade, constrictive and restrictive physiology
- Chapter 9. Pitfalls in the evaluation of hemodynamic data
- Chapter 10. Coronary angiography and cardiac ventriculography
- Chapter 11. Coronary anomalies
- Chapter 12. Pulmonary angiography
- Chapter 13. Angiography of the aorta and peripheral arteries
- Chapter 14. Myocardial and coronary blood flow and metabolism
- Chapter 15. Intravascular imaging
- Chapter 16. Endomyocardial biopsy
- Chapter 17. Percutaneous circulatory support : intra-aortic balloon counterpulsation, impella, tandem heart and extracorporeal bypass
- Chapter 18. Percutaneous transluminal coronary angioplasty
- Chapter 19. Atherectomy, thrombectomy and distal protection devices
- Chapter 20. Coronary stenting
- Chapter 21. Percutaneous interventions for valvular heart disease
- Chapter 22. Interventions for adult structural heart disease
- Chapter 23. Peripheral interventions
- Chapter 24. Thoracic aortic endovascular repair
- Chapter 25. Percutaneous epicardial techniques
